Spell Sling

Introduction

Your in a wizard duel! Outsmart your opponent, and charge up powerful spells to strike them down.

How to Win

You win the game if your opponent reaches 0 hp or if they end their turn with distance at 11 or more.

Spell Anatomy

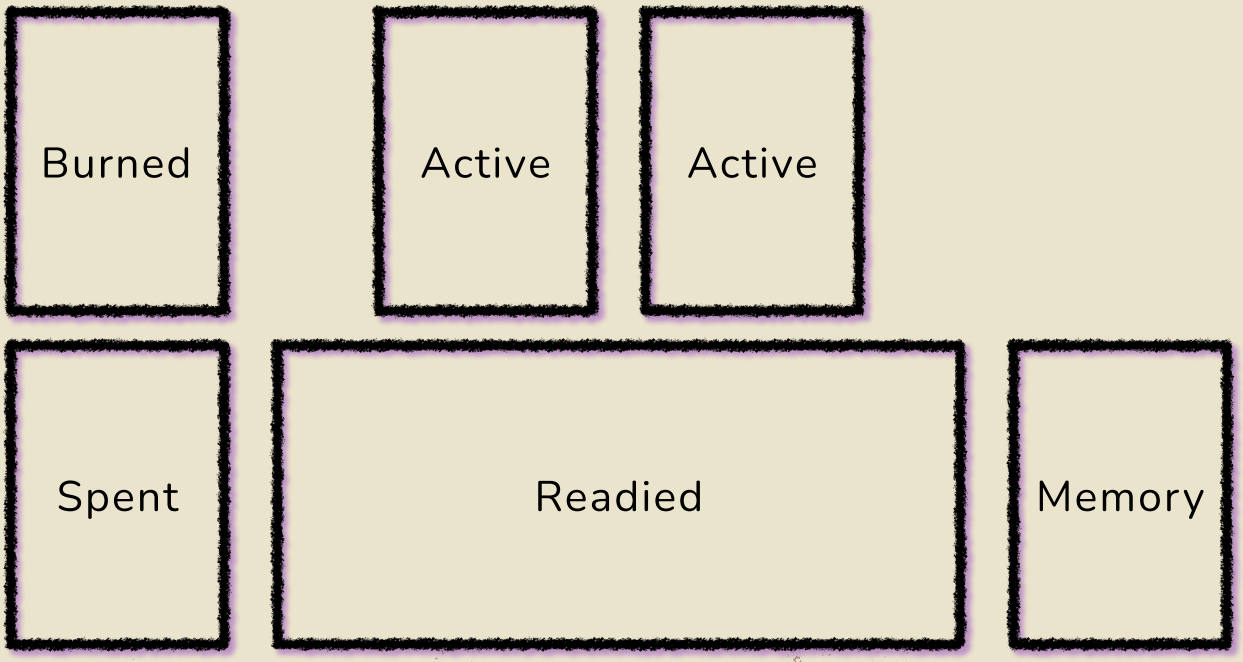

Name: Name of the spell

Type: Charge, Enchant or Retort. See Spell Types

Range: The distance needed for a spell to be effective.

Effect: What the spell does if it is in range.

Zones

Memory

Memory holds the 12 spells you've prepared for the duel. Your memory is hidden from your opponent, but you may look through it at any time.

Readied

Your readied spells sit in a facedown row in front of you. They represent the spells you've planned to use

Active

You can have up to 2 active spells at a time which sit above your readied spells.

Spent

Where spells go after activating.

Burned

Effectively removed for the rest of the duel.

How to Play

Setup

1. Choose a way to track distance and player hp.
2. Set distance and both players' hp to 5.
3. Determine who goes first.
4. Both players ready 5 spells.

Turn Structure

On your turn, take 2 actions:

- **Cast**: Begin casting a readied spell.
- **Charge**: Place an energy on all your active Charge spells.
- **Move**: chose 1
    - Advance 1-2 : Decrease distance by 1-2
    - Retreat 1 : Increase distance by 1.
- **Plan**: If you have 2 or less readied spells, return them to memory and ready 5 spells.

Refresh

You may burn one of your spent spells to return the rest to memory at any time.

! If one of your 2 actions isn't **Cast** or **Charge**, you will take 1 damage.

You cannot **Cast** if you have no readied spells, and you cannot **Charge** if you have no active charge spells.

Casting a Spell

When you cast a spell, place it into one of your active spell zones face up. If you have no open active spell zones, you cannot cast spells.

Each spell type works a little differently when cast.

Charge - Serve as the main form of attack, needing X charges before activating.

Enchant - Grants passive effects while charged. When cast, place X charges on the enchant, and it discharges at the end of your turns. Spend the enchant when it is out of charges.

Retort - Reactive spells that can't be cast normally. When a retort's trigger is met, you may cast it from your readied spells. Retorts aren't spent until their trigger is finished/spent.

Keywords

Advance X - Decrease distance by X.

Retreat X - Increase distance by X.

Burnout - Burn this spell.

Rooted - You cannot advance or retreat until the end of your next turn.
